231 is said to be due to the expense of importing feedstuffs. Donkeys and Con-
[492] nemara ponies are kept as draft animals, and almost everything is conveyed in panniers. There are only five carts
[493] on the island, of which the first was made in 1907 by a local carpenter from one he had seen on the mainland. The
●335 two carpenters make anything required, including lobster pots, fishing nets, furniture, doors, windows, and hand barrows, which consist of two shafts joined by slats and a single wheel in the rear, all of wood.

221 Digging and manuring of the land begins in late February, and seaweed is brought from the shore as needed. The potatoes are planted about St. Patrick's Day (March 17); oats, two to three weeks later; barley and mangolds at the end of April or in May. Most calves are born from March to May. In dry years peat is cut from May onwards, laid out to dry, and eventually stacked in ricks six feet high secured by large stones, or placed against a stone wall. Apart from routine work, there is little to do until the hay harvest, generally in August or September, though sometimes a cut is made in July (as in 1954) with the hope of a second crop in the autumn. Oats and barley are harvested in September, after which the main potato digging takes place, though some are dug earlier for the household. From October to late February, there is little to do except tend the stock, though some men build walls four feet high at
[653] 12/6 a perch or mend roads under government schemes. Few farmers make the ricks of peat beside their houses so commonly seen in Ireland; most fetch it as required.

The Sea

228 Encouragement of fishing was a major aim of the Congested Districts Board, and from the eighteen-nineties to the
